

11/14/09 - How To Keep Your Files Synced When Using More Than One Computer

You want your important files backed up. Maybe you've emailed files to yourself or carried around a flash drive. Did you know you can keep up to 2GB of your files synchronized between multiple computers for free?

Say hello to Dropbox.com. After a free registration on their website, download and install the software. Drag your important files to your DropBox folder, and you'll be able to access this "magic pocket" from any computer where you've installed Dropbox.

You can also access your files on any computer with internet access by logging in at DropBox.com.

It's extremely simple, and works with Windows, Mac, and Linux.
